

Autumn Term 1C Geography

To launch our new topic, we explored the 7 continents of the world. We first learnt a song all about the continents of the world. After we worked in groups, looking at a world map to decide where to place the continents and create a world map as a class. We then looked at where the equator is and discussed how the climate is hot in countries near the equator. We discussed how the North and South Poles are the coldest places on Earth because they are furthest away from the sun and the equator. Finally, we discussed what we would pack in a suitcase if we travelled to the Antarctica compared to items we would pack for visiting Africa.

By the end of the topic in 1C we know...

- That we live in the continent of Europe
- Where Worcester is on a map of Great Britain.
- The hottest place in the world is around the middle of the Earth.

- That the North Pole and the South Pole are the coldest places on Earth.
- The continents of the World by singing a song.

- That weather in the different countries depends on how close they are to the middle of the Earth or how close they are to the

North or South Pole.

- Africa is the hottest continent
- Antarctica is the coldest continent.
